**About Almaden**

Almaden is a well-financed mineral exploration company working in North America. The company has assembled mineral exploration projects, including the Ixtaca Zone of the Tuligtic project, through its grass roots exploration efforts. While the properties are largely at early stages of development they represent exciting opportunities for the discovery of significant gold, silver and copper deposits as evidenced at Ixtaca. Almaden's business model is to find and acquire mineral properties and advance them in the most cost effective manner. Historically, Almaden has sought option agreements with other companies, which acquire an interest in a project by making payments and exploration expenditures. Through this means the company has been able to expose its shareholders to discovery and capital gain without the funding and consequent share dilution that would be required if the company were to have developed these projects without a partner. More recently, the company has expanded this business model, described by some as prospect generation, by deploying its own drill rigs to allow for low-cost, first pass drilling of prospects, enabling cost-effective exposure to a larger number of potential discoveries. It is this process which led to Almaden's recent discovery of the Ixtaca Zone.
